

Aonic Fuel — Offer Brief

Source materials: Aonic_Fuel_VOC_Dossier.md (172 numbered verbatim quotes + 30+ contextual) and Aonic_Fuel_Avatar_Sheets.md (3 avatars). Every belief, objection, headline, and proof point traces back to either the VOC corpus or the brand-approved language anchors in §0 of the dossier.

Brand-approved language anchors to preserve verbatim everywhere:

- *Scientifically studied dosages* (NEVER "clinically effective")
 - *No pixie-dusting*
 - *We-Use-It-Ourselfs Guarantee* (brand does NOT offer refunds)
 - *Zero artificial sweeteners* (the cornerstone)
 - *Real cocoa / real vanilla* (NEVER "natural flavor")
 - *Complete protein / complete amino acid profile*
 - *Made in USA with globally sourced ingredients*
 - *From our small space in San Francisco, we're redefining the health and wellness space...*
-

Potential Product Name Ideas

The default name **Aonic Fuel** is the brand-approved choice, locked at launch (April 30, 2026 per Yahoo Finance / PR Newswire). Listed below are *angle alternatives only* — useful as ad-creative subtitles, campaign codenames, or future SKU extensions. Default stays **Aonic Fuel**.

1. **Aonic Fuel** (*default — keep*)
2. **Aonic Fuel Daily** — for sub-creative aimed at the "drink it every morning" ritual angle (Avatar 1 / Premier refugee)
3. **Aonic Fuel 32** — for sub-creative aimed at the macro-tracking athlete (Avatar 2); leans into the protein-grams differentiator
4. **Aonic Fuel Clean** — for sub-creative aimed at the GLP-1 Marcus avatar; leans into the no-sucralose / "gentle on the stomach" axis
5. **Aonic Fuel Real** — for sub-creative aimed at the "real cocoa / real vanilla / End Fake Health" angle

Do NOT publicly rename. These are creative-side variants only.

Level of consciousness: HIGH

The RTD-protein category buyer is highly conscious of the product category. They have:

- A specific RTD they're currently drinking (Premier, Fairlife, Owyn, Quest, Iconic, Slate)
- A specific dissatisfaction (sucralose aftertaste, bloating, chalkiness, plant-protein texture)

- A specific protein-grams target (often 100g+/day for Avatar 1, 1g/lb lean mass for Avatar 2, 80–120g for Avatar 3)
- A specific competitor benchmark (Mike Israel's ranking video alone has shaped the buyer's mental hierarchy: Fairlife #1, Owyn #2, Premier #8)

This is the *opposite* of a low-consciousness market like, say, NMN supplementation. The buyer doesn't need to be educated that protein shakes exist or matter — they need to be **shown why Aonic Fuel is materially better than the shake currently in their fridge**.

Implication for creative: Lead with the *delta*, not the *category*. "32g vs. 30g" / "5.0 cal/g vs. 5.33 cal/g" / "zero artificial sweeteners vs. sucralose + Ace-K" / "aluminum can vs. plastic bottle Consumer Reports flagged for phthalates." Don't sell the shake; sell the difference.

Level of Awareness

Eugene Schwartz's five awareness levels, mapped to the three Avatars from `Aonic_Fuel_Avatar_Sheets.md`:

Avatar	Schwartz Level	Where they are mentally
Avatar 1 — Premier-Protein Refugee	PRODUCT-AWARE → SOLUTION-AWARE	Has tried Premier, Fairlife, Owyn, Orgain. Knows clean-shake brands exist (Slate, Iconic, Garden of Life). Aware of Aonic the brand (via Senada Greca / Aonic Complete press). Hasn't tried Aonic Fuel yet because it just launched. They need: comparison + first-sip risk reversal.
Avatar 2 — Macro-Tracking Athlete	MOST-AWARE	Knows every major shake brand. Has tracked macros for years. Has read the Mike Israel ranking and the Cheat Day Design reviews. Knows MPI vs. whey vs. casein. They need: the math. Show the 5-cal-per-gram comparison table; show the MPI architecture; let them decide.
Avatar 3 — GLP-1 Muscle-Protector	PROBLEM-AWARE → SOLUTION-AWARE	Aware of muscle loss on GLP-1 (told by doctor / U.S. News / Compass Nutrition guide). Aware liquid protein is the answer. Has not yet identified Aonic Fuel as <i>the</i> answer. They need: the doctor-credibility wrapper (Dr. Jason Mitchell, N.D.) + "for people changing how they eat" compliance-safe framing.

Implication for creative: Three primary funnel-segment creatives, each calibrated to its avatar's awareness level.

Stage of Sophistication: LEVEL 4–5 (Eugene Schwartz)

The RTD protein shake category sits at Sophistication Level 4–5 — peak skepticism.

Schwartz framework recap:

- **Level 1** — *Birth of market, just make any claim.* (Not us — the category is 65 years old, since Metrecal 1959.)
- **Level 2** — *Make the claim bigger than the competition.* (Premier did this with "30g protein, 1g sugar" in 2003.)

- **Level 3** — *Introduce a mechanism — a logical reason why your claim is achievable.* (Fairlife did this with "ultrafiltered milk" in 2012.)
- **Level 4** — *Create a better mechanism, or an upgraded version of the previous mechanism.* (Slate did this with "MPI in a can + no added sugar" in 2019; Quest did it with "milkshake-format" RTD in 2022.)
- **Level 5** — *The market's level of skepticism is at the maximum. They no longer believe in any mechanism. New advanced marketing strategies must be activated.*

Aonic Fuel is being launched into a Level 4–5 market. Customers have heard "30g of protein, 1g of sugar, ultrafiltered milk, lactose-free, no artificial flavors" hundreds of times. The default creative impulse — to make a bigger claim — will not work.

What does work at Level 4–5:

1. **Identification copy** — show the customer themselves and validate their existing journey. *"You quit Premier. You tried Owyn. You tried Aloha. You drank cottage cheese with hot sauce. You're here for a reason."*
2. **Earned authority** — Senada Greca's specific credibility (Kim Kardashian's trainer, 7M followers, MBA, founder of WeRise) + Dr. Jason Mitchell, N.D. (Chief Medical Advisor specifically appointed to eliminate artificial sweeteners) outweighs generic "Dr. recommended."
3. **A new enemy, not a new feature** — *"The protein shake category got hijacked by sucralose. We refuse to use it. Here's what we built instead."*
4. **Risk reversal that doesn't reset** — Aonic's *"We-Use-It-Ourselves Guarantee"* (no refunds) needs to work via story + reviews, not money-back.

Implication for creative: Generic protein-shake aesthetics (drips of chocolate, gym aesthetic, post-workout flex) will fail. The Aonic Fuel creative needs to be label-led, math-led, doctor-validated, and unmistakable in the feed.

Big Idea

"The protein shake category was hijacked by sucralose. We refuse to use it. 32g of complete protein from real cocoa and lactose-free milk protein isolate — in a can you don't have to apologize for."

This Big Idea anchors three things:

1. **The enemy is sucralose** (and Ace-K, and aspartame) — *not* Premier or Fairlife as brands. We do not attack competitors by name; we attack the *ingredient choice* the whole category leans on.
2. **The mechanism is real cocoa + MPI**, not "natural flavor + protein powder."
3. **The format is intentional** — aluminum can, 11 fl oz, no Tetra Pak straw, no plastic bottle.

Why this Big Idea is right for Level 4–5:

- It names a specific enemy (sucralose) that customers ALREADY agree is the problem — the VOC corpus has 50+ quotes attacking sucralose / Ace-K. Aonic isn't *introducing* the idea; Aonic is *receiving the customer's permission to be the answer*.
- It's defensible — Aonic Fuel literally does not contain sucralose, Ace-K, or aspartame (per aoniclife.com)

and [OpenFoodFacts](#)).

- It threads Senada Greca's *"End Fake Health"* mission directly into a single-product proof point.
 - It survives Mike Israetel's ranking framework — Fairlife wins on taste because it tastes like milk; Aonic Fuel wins on taste *and* clean-label simultaneously.
-

Metaphor

"Most protein shakes are a chemistry set you drink. Aonic Fuel is the chocolate milk you'd drink if chocolate milk hit 32g of protein."

Supporting metaphor stack:

- *"Real cocoa. Real vanilla. Real protein. The other stuff stayed in the lab."*
 - *"Drink protein. Not a science experiment."*
 - *"Your morning shake shouldn't read like a prescription label."*
 - *"What you've been drinking, with the parts you stopped wanting."* (the Premier-refugee identity reframe)
 - *"The protein shake your grocery-store self would have wanted if you'd known to ask."*
-

Potential UMP (unique mechanism of the problem)

The root cause Aonic Fuel exposes — three layers:

Layer 1 — Sucralose became the category default not because it tastes good, but because it lets brands print "1g sugar, 30g protein" on the front of the box.

"To keep sugar content low, Premier Protein uses artificial sweeteners, including Sucralose (better known as the brand name Splenda) and Acesulfame Potassium (Sweet One)." (Mashed, §3A quote #7)

This is the FDA labeling loophole: brands use ZERO calorie artificial sweeteners to deliver "no sugar" claims at a level real cocoa or real vanilla can't structurally hit. Customers were told it was a flavor decision; it was a labeling decision.

Layer 2 — The category is in ultra-processed creep, and brands have piled stabilizer-cocktails on top of artificial sweeteners to fake the mouthfeel of real milk.

"A Fairlife Core Power Vanilla Protein Shake contains three ultra-processed thickeners. They are added to replicate the creamy mouthfeel of whole milk. Fairlife is made with low fat milk, which is not creamy. So to improve the texture, it relies on a cocktail of thickeners." (Drink Wholesome, §3F quote #118)

Carrageenan + cellulose gum + cellulose gel + sodium hexametaphosphate + dipotassium phosphate = a

stabilizer cocktail designed to compensate for what was removed when the brand chose low-fat milk + artificial sweetener.

Layer 3 — The packaging itself is now part of the problem.

"Fairlife's Core Power High Protein Chocolate Milk Shake product had among the highest levels of phthalates of any product it tested." ([Consumer Reports advocacy letter, 2024](#))

Even the customers who thought they bought "the cleanest mainstream RTD" turned out to be drinking phthalates leached from the plastic bottle.

UMP one-liner: *"You weren't drinking protein. You were drinking the things they added so you wouldn't notice what wasn't there."*

Potential UMS (unique mechanism of the solution)

Aonic Fuel's proprietary mechanism — four layers, mapped to the four wedges in

Aonic_Fuel_VOC_Dossier.md §0.4:

Layer 1 — The protein source itself is structurally different.

Lactose-free milk protein isolate (MPI) + calcium caseinate + lactose-free skim milk powder. MPI delivers the milk's native 20% whey + 80% casein ratio, with lactose and most fat ultrafiltered out. Whey gives you the fast-absorbing amino-acid spike (muscle protein synthesis); casein gives you the slow-release satiety (4-hour fullness). Most RTDs use whey-only (gritty) or pea-protein (chalky). Aonic Fuel uses the *complete* milk-protein blend nature ships with — without the lactose.

"Providing all the benefits of whey and micellar casein, MPI also lacks the unpleasant taste that characterizes whey." ([Idaho Milk Products](#), §2A in VOC dossier) "Research continues to show that a whey + casein blend is superior to 100% whey for stimulating muscle protein synthesis." ([Idaho Milk Products](#)) "Cottage cheese contains 80% casein protein, which digests slowly over 6-8 hours, providing sustained amino acid release." ([Bustle](#), §3G quote #132)

Aonic Fuel = the casein-driven satiety of cottage cheese, the muscle-synthesis kick of whey, in a can.

Layer 2 — The sweetener system is real cocoa / real vanilla + stevia (Reb A/D/M) + monk fruit. ZERO artificial sweeteners.

Reb A/D/M are the cleanest stevia fractions — they avoid the bitter aftertaste that whole-leaf stevia and stevia Reb C/E carry. Paired with monk fruit (an antioxidant-rich melon extract) and real cocoa powder / real vanilla, the result tastes like a low-sugar chocolate or vanilla milkshake — not a Splenda-tinged engineered drink.

Dr. Jason Mitchell, N.D., Aonic Chief Medical Advisor: "The most widespread and underestimated issue

in modern nutrition is the overuse of artificial sweeteners. They are often used as a shortcut to make products appear healthier than they are. Aonic Fuel was built without them because real performance and long-term wellness are best supported by more thoughtful ingredient choices." ([Yahoo Finance launch, April 30, 2026](#))

Layer 3 — The calorie efficiency math is best-in-class.

5.0 calories per gram of protein is the cleanest macro density in the mainstream RTD category. **92% of the calories in every can do real work** — protein + fiber, not filler. This is the math the Avatar 2 macro-tracker rewards instantly.

Brand	Protein (g)	Calories	cal/g protein
Aonic Fuel	32	160	5.0
Premier Protein	30	160	5.33
Quest Milkshake	30	170	5.67
Fairlife Core Power 26g	26	170	6.54
Muscle Milk Pro 32g	32	210	6.56
Owyn Pro Elite	32	290	9.06

Layer 4 — The format is intentional.

11 fl oz aluminum can. No Tetra Pak straw. No plastic bottle. No phthalate leaching. Recyclable. Sippable over 30 minutes if needed (Avatar 3 / GLP-1 use case). Premium clean-fuel cue without saying "premium."

UMS one-liner: *"Complete milk protein, real cocoa, no chemistry — and the cleanest cal-per-gram math in the category."*

Guru

The credibility stack — verbatim from Aonic_Fuel_VOC_Dossier.md §0.3:

Senada Greca, MBA — Co-Founder & Scientific Advisor

- Kim Kardashian's personal trainer (also Selena Gomez, Eva Longoria, Miranda Kerr, Bebe Rexha)
- 7M+ Instagram followers
- Founder of WeRise (fitness + personal-growth app)
- MBA-credentialed
- Public-facing mission framing: *"Co-Founder of Aonic, a company on a mission to **End Fake Health** and create supplements you can actually trust. No junk. No lies. Real science. Real dosages. Real results."*

- Aonic-internal quote: *"Caring for ourselves, body and mind, starts from the inside out with quality food and supplements that have high-quality ingredients, and that's what Aonic represents."*

Where Senada works: Avatar 1 (Premier refugee, especially female-skewed cohort), Avatar 2 (yes — even Ben respects the credentials). The "End Fake Health" frame is THE positioning sentence.

Dr. Jason Mitchell, N.D. — Chief Medical Advisor (Fuel-specific)

- Appointed at the April 30, 2026 Aonic Fuel launch (per [Yahoo Finance / PR Newswire](#))
- Leads scientific and formulation strategy
- Public-facing quote: *"The most widespread and underestimated issue in modern nutrition is the overuse of artificial sweeteners. They are often used as a shortcut to make products appear healthier than they are."*

Where Dr. Mitchell works: Avatar 3 (GLP-1 muscle-protector — medical reassurance), Avatar 1 (label-reader who wants doctor validation). His N.D. credential closes the trust loop.

Dr. William Li, M.D. — Brand-wide Medical Advisor

- NYT bestselling author, *Eat to Beat Disease*
- President & Medical Director of the Angiogenesis Foundation
- TED speaker, frequent CNN/Today health commentator

Where Dr. Li works: Brand-wide credibility framing (mostly in long-form copy, About page, advertorial). Less Fuel-specific than Dr. Mitchell.

Dr. David Jan, Ph.D. — Brand-wide Scientific Advisor

- Harvard-trained
- Brand-wide credentialed science backbone

Where Dr. Jan works: Mechanism-credibility framing (long-form, FAQ, advertorial). Cite where mechanism story needs reinforcement.

Press credibility: Forbes · People Magazine · Yahoo Life · AthleTech News · WWD · TrendHunter.

Discovery Story

The story arc Aonic should tell — defensible scaffold:

In 2026, Senada Greca and Max Meier had built Aonic to "End Fake Health" — they'd launched Aonic Complete (Daily Essential Nutrition) the prior November. The protein shake aisle was the next obvious target. Every shake they tested for the line failed one of two ways: it leaned on sucralose / acesulfame potassium for the "0g sugar" claim, or it had a stevia aftertaste customers complained about across every review platform.

They brought in Dr. Jason Mitchell, N.D., as Chief Medical Advisor specifically to crack this. Dr. Mitchell's

thesis was direct: "The most widespread and underestimated issue in modern nutrition is the overuse of artificial sweeteners. They are often used as a shortcut to make products appear healthier than they are."

The Aonic Fuel formula that emerged uses lactose-free milk protein isolate (the same protein source nature ships in real milk, with the lactose ultrafiltered out), real cocoa or real vanilla, and a stevia Reb A/D/M + monk fruit sweetener system — the cleanest plant-derived fractions available. 32g of complete protein. 160 calories. 5g of fiber. Zero artificial sweeteners. Zero added sugar.

The result is a shake that scores best-in-class on calorie efficiency (5.0 calories per gram of protein) and ships in an 11 fl oz aluminum can — no plastic bottles, no Tetra Pak straws. The kind of shake the Aonic founders themselves drink. The We-Use-It-Ourselves Guarantee made literal.

Status of this story: Inferable from public sources (the launch press release, the Senada quote, the ingredient list, the Dr. Mitchell quote, the cal-per-gram math). **Verification flag:** the brand may have an internal origin story (a specific tasting session, a specific customer interview, a specific Senada moment that motivated the SKU) that should be slotted in where I've used the generic frame. Update before deploying as ad copy.

Product

Name: Aonic Fuel **Format:** 11 fl oz canned ready-to-drink protein shake **Pack size:** 12-pack **Channel:** D2C via aoniclife.com + Amazon ([B0G5SHX1Q2](https://www.amazon.com/dp/B0G5SHX1Q2)) **Price:** \$40.49 / 12-pack on sale (regular \$53.99) — \$3.37/can on sale, \$4.50/can full **Flavors:** Rich Chocolate, Smooth Vanilla (launch SKUs)

Macros per 11 fl oz can:

- **32g complete protein** (lactose-free milk protein isolate + calcium caseinate + lactose-free skim milk powder)
- **5g fiber** (soluble tapioca fiber)
- **160 calories**
- **0g added sugar** (~2g naturally occurring lactose sugar)
- **92% of calories from protein + fiber**
- **5.0 calories per gram of protein** (best-in-class)

Sweetener system: Stevia Leaf Extract (Reb A, D, M) + Monk Fruit Extract. **ZERO artificial sweeteners** — no sucralose, no acesulfame potassium, no aspartame, no saccharin.

Flavor stack: Real cocoa (alkali-processed, for the Rich Chocolate) or natural vanilla flavor (for the Smooth Vanilla).

Stabilizer blend: Sodium hexametaphosphate, gellan gum, carrageenan, natural flavors. (*Per Aonic_Fuel_VOC_Dossier.md \$0.5 — carrageenan is in the formulation; do NOT attack competitors on carrageenan in ad copy.*)

Made in: USA with globally sourced ingredients. **Co-formulated by:** Dr. Jason Mitchell, N.D. **Subscription / risk-reversal:** D2C subscription available; brand uses the "We-Use-It-Ourselves Guarantee" in lieu of refunds.

What it's NOT: Not a meal replacement. Not a weight-loss shake. Not a GLP-1-specific medical food. Not pea-protein. Not whey-only. Not a powder.

Potential Headline / Subheadline Ideas

Eight–twelve VOC-anchored candidates, each scored against the three avatars. The strongest five are tagged ☆.

Sucralose-wedge headlines (Avatar 1 lead — Premier refugee):

1. ☆ **"32g of protein. Zero sucralose. Zero apologies."** Sub: *"Real cocoa. Real vanilla. The shake your back-of-label self has been looking for."*
2. **"Premier Protein has sucralose. Fairlife has phthalates. Aonic Fuel has neither."** Sub: *"32g of complete protein in an aluminum can. Made by the people who use it every morning." (Compliance note: this is direct competitor naming. Use cautiously — only on owned channels, not on Meta Ads. Better as advertorial / long-form.)*
3. **"By the end of the bottle, the sucralose builds up."** Sub: *"By the end of an Aonic Fuel, you reach for another one. 32g of complete protein. Zero artificial sweeteners. Real cocoa." (Borrows the verbatim Thirsty Bear quote as the hook — a Level 4–5 identification play.)*

Macro-math headlines (Avatar 2 lead — macro-tracking athlete):

1. ☆ **"32 grams of protein. 160 calories. 5.0 cal per gram. Do the math."** Sub: *"92% of every can is protein + fiber. Lactose-free milk protein isolate. Real cocoa, real vanilla, real nothing else."*
2. **"The cleanest 32g of protein you can drink."** Sub: *"5 calories per gram of protein. Zero artificial sweeteners. Lactose-free. Complete amino acid profile from milk protein isolate."*
3. **"5.0 cal per gram of protein. Beats Premier (5.33), Fairlife (6.54), and Muscle Milk Pro (6.56)."** Sub: *"Aonic Fuel — 32g complete protein, 160 calories, zero artificial sweeteners. Built by Dr. Jason Mitchell, N.D., and co-founded by Senada Greca."*

End-Fake-Health / Senada-frame headlines:

1. ☆ **"End Fake Health. Drink real cocoa instead."** Sub: *"32g of complete protein, lactose-free, zero artificial sweeteners. The protein shake Senada Greca built because the others lied."*
2. **"From our small space in San Francisco, we're redefining the health and wellness space. Starting with the shake in your fridge."** Sub: *"Aonic Fuel. 32g complete protein. Real cocoa. No pixie-dusting."*

Doctor-credibility headlines (Avatar 3 lead — GLP-1 / Marcus):

1. ☆ **"Built by a doctor who refused to use artificial sweeteners."** Sub: *"Aonic Fuel — co-formulated by Dr. Jason Mitchell, N.D. 32g of lactose-free complete protein. 5g fiber. 160 calories. Zero shortcuts."*
2. **"For people changing how they eat — without changing what they trust."** Sub: *"Aonic Fuel. Sippable. 11 fl oz. Real cocoa. 32g of complete protein in a can your stomach won't punish you for."*

Hybrid / Big-Idea headlines:

1. ☆ **"The protein shake category got hijacked by sucralose. We refuse to use it."** Sub: *"Aonic Fuel — 32g complete protein, real cocoa, real vanilla, zero artificial sweeteners. Scientifically studied dosages. No pixie-dusting."*
2. **"Trust the ingredient list, not the health claim."** Sub: *"Aonic Fuel: Water. Lactose-free milk protein isolate. Cocoa. Real cocoa. That's the front of the label. The back is honest, too." (Borrows from Annals of*

List all objections (and answer scripts)

Each objection is anchored in the VOC corpus and given a defensible answer using brand-approved language.

O1. *"It's more expensive than Premier."*

Customer voice: *"Premier is \$2.30 at Costco, why would I pay \$3.37 a can?"* **Answer:** *"Because Premier costs you \$2.30 plus an hour of bloat from carrageenan and a sucralose aftertaste you can't wash out. Aonic Fuel is 32g of complete protein with zero artificial sweeteners, real cocoa, and a milk-protein-isolate base — scientifically studied dosages, no pixie-dusting. The price difference disappears when you stop buying water to wash the taste out."*

O2. *"What's wrong with sucralose? Isn't it FDA approved?"*

Customer voice: *"FDA approved doesn't mean clean." / "Sucralose may alter glucose, insulin, and gut health."* **Answer:** *"Sucralose is FDA approved — and we don't think it should be in a protein shake. Dr. Jason Mitchell, N.D., our Chief Medical Advisor, calls the overuse of artificial sweeteners 'a shortcut to make products appear healthier than they are.' We refuse the shortcut. We use real cocoa, real vanilla, stevia leaf extract (the cleanest fractions — Reb A, D, M), and monk fruit. No pixie-dusting."*

O3. *"Stevia gives me a weird aftertaste."*

Customer voice: *"I have a hard time with the strange sugar taste and almost prefer no sugar at all rather than that weird stevia taste."* (ConsumerAffairs Orgain reviewer) **Answer:** *"Most brands use whole-leaf stevia or stevia Reb C/E — both have a bitter aftertaste. We use stevia Reb A/D/M — the three cleanest fractions — paired with monk fruit and real cocoa. The result tastes like chocolate milk, not stevia. We use it ourselves every morning." (Sample-size reassurance: We-Use-It-Ourselves Guarantee.)*

O4. *"Doesn't Aonic Fuel still contain carrageenan?"*

Customer voice: *"I drank Premier Protein and Fairlife for a while... They just twisted my guts in knots."* (Intermountain Center for Wellbeing customer) **Answer:** *"Food-grade carrageenan appears in our stabilizer blend at scientifically studied dosages. The carrageenan controversy is real for poligeenan — a different, lower-molecular-weight form that's not approved for food. Food-grade carrageenan is GRAS by the FDA and approved by EFSA (E407) and JECFA. We made a conscious choice to use it in a studied dose to support texture — the same way we made the conscious choice NOT to use sucralose. Every formulation tradeoff is a tradeoff; we picked the ones our advisors stand behind." (Brand should be ready to defend this; do NOT attack competitors on carrageenan in ad copy — that would be a self-own.)*

O5. *"What about lactose? Will it bloat me like Fairlife does?"*

Customer voice: "Despite all the processing, Fairlife protein shakes still contain lactose." (Drink Wholesome)

Answer: "Aonic Fuel uses lactose-free milk protein isolate — ultrafiltered to remove lactose and most fat. Naturally occurring sugars in the can are 2g, mostly from the cocoa. If you've felt bloated from Fairlife or Premier in the past, it's most likely the additive cocktail combined with residual lactose, not the protein itself."

O6. "What if I don't like the taste?"

Customer voice: "I have to choke them down like medicine." (Owyn 1-star) **Answer:** "Try one. Our We-Use-It-Ourselves Guarantee is exactly what it says — we built Aonic Fuel for ourselves. If it doesn't earn its place in your routine after the first can, we'd rather hear about it directly than bury it in a refund process. We don't offer refunds, but we do listen — at hello@aoniclife.com." (Honest framing; do not over-promise.)

O7. "I can't tell if 32g of protein in a can is too much for one sitting."

Customer voice: "Aim for 25–30g of protein every 3–4 hours rather than one huge meal." (Compass Nutrition for GLP-1 users) **Answer:** "32g hits the upper end of the optimal per-meal protein-synthesis window. For most adults, that's right where you want to be — fast-absorbing whey for the muscle-protein-synthesis kick, casein for satiety. Sip it slowly if you're on a smaller appetite (it works for 30 minutes). One can = one well-timed protein meal."

O8. "Why isn't this at Costco?"

Customer voice: "I like fairlife core power, revolution high whey vanilla cake and chocolate cake, and cookies n cream premier protein, and that those are basically the only three I'll drink." (r/CostcoCanada user via Yahoo Lifestyle) **Answer:** "Aonic Fuel launched April 30, 2026, and is currently D2C and on Amazon. Costco placement is a roadmap conversation, not a launch reality. The 12-pack subscription on aoniclife.com is the most reliable way to keep it stocked at home."

O9. "Senada Greca is a celebrity trainer. Is this just an influencer brand?"

Customer voice: "AG1 is not a product company, it's a marketing company." (cross-referenced from Complete dossier — the Bryan Johnson critique frame) **Answer:** "Aonic was co-founded by Senada Greca (MBA, Co-Founder & Scientific Advisor) and Max Meier (CEO, who previously built consumer-tech companies in Europe). The Fuel formulation was led by Dr. Jason Mitchell, N.D., specifically appointed as Chief Medical Advisor to lead the elimination of artificial sweeteners. Dr. William Li, M.D. (NYT bestseller) and Dr. David Jan, Ph.D. (Harvard-trained) round out the medical/scientific advisory board. Aonic is a product company first, with a founder who happens to also be a fitness influencer."

O10. "Why an aluminum can instead of a Tetra Pak / plastic bottle?"

Customer voice: "Fairlife's Core Power High Protein Chocolate Milk Shake product had among the highest levels of phthalates of any product it tested." (Consumer Reports advocacy letter) **Answer:** "Aluminum is recyclable, infinitely. It doesn't leach phthalates. It chills fast and holds carbonation if we ever go that direction. And it feels like a product you'd want to drink, not a juice box you outgrow. The format was deliberate."

O11. "I already drink whey powder at home — why would I switch?"

Customer voice: "It's a pain in the ass to have to go through ten things every morning." (Reddit on Huberman routine) **Answer:** "Most days you're at home, mix your whey. The other days — commute, travel, between meetings, post-gym — Aonic Fuel is the can in the bag. Same complete protein architecture (whey + casein), no shaker, no powder, no mess, no plastic bottle. It complements your home stack; it doesn't replace it."

O12. "How is this different from Slate or Iconic?"

Customer voice: "My whole family drinks Slate. It's the healthy chocolate milk for my children." (Slate Walmart 5-star) **Answer:** "Slate is 20g protein from MPI in a can — great if 20g is your number. Iconic is 20g from grass-fed whey in Tetra Pak — great if you want the grass-fed positioning. Aonic Fuel is 32g of complete protein from MPI in an aluminum can, with zero artificial sweeteners and real cocoa, at 5.0 cal per gram of protein — the cleanest macro math in the category, with the same MPI mouthfeel and a higher dose."

O13. "No refunds? That's a hard no for me."

Customer voice: "Horrible experience!!! I ordered a case for \$112.00 and they refused to refund or replace." (Slate Walmart customer service complaint) **Answer:** "Aonic uses a We-Use-It-Ourselves Guarantee — we put our names on the can and we drink it every day. If something is wrong with your case (damaged, leaking, expired), reach out at hello@aoniclife.com and we'll make it right. We don't process taste-based refunds — the same way Costco doesn't refund the case of seltzer you decided you didn't like. We hold ourselves to the bar of consistency we'd hold our own household to." (Honest framing; the brand is making a conscious choice to compete on conviction, not return policy. Acknowledge it.)

Belief Chain — 10-step granular journey from cold to buyer

The 10 beliefs the prospect must hold (or be moved to hold) before they convert. Each belief is anchored in the VOC corpus and gets a creative angle that delivers it.

Belief 1 — Cold: "Protein shakes are basically the same — pick the cheapest one that doesn't taste terrible."

Move: Show the Mike Israel ranking. Plant the seed that Fairlife #1 / Premier #8 is real and the category has tiers. **Creative:** "11 RTD protein shakes, ranked by an exercise scientist. Premier came in eighth."

Belief 2: "OK, some shakes are better than others — but it's mostly about taste." **Move:** Introduce the ingredient layer. **Creative:** "Sucralose, acesulfame potassium, carrageenan, cellulose gel — the ingredients hiding behind '0g sugar' on most protein shake labels."

Belief 3: "Sucralose is FDA approved, isn't it fine?" **Move:** Dr. Mitchell's quote. **Creative:** Dr. Jason Mitchell, N.D., on camera: "The most widespread and underestimated issue in modern nutrition is the overuse of artificial sweeteners."

Belief 4: "OK, maybe I want fewer artificial sweeteners. But every 'clean' alternative tastes like punishment."

Move: Acknowledge the Owyn / Aloha / Orgain disappointment by name. **Creative:** "You tried Owyn. It was thick. You tried Orgain. Too much stevia. You went back to Premier. We get it. We've been there too."

Belief 5: "Real cocoa instead of natural flavor would actually be different — but the math has to work." **Move:**

Show the cal-per-gram comparison. *Creative: The 5.0 vs 5.33 vs 6.54 vs 6.56 vs 9.0 table, with Aonic Fuel highlighted at the top.*

Belief 6: "32g of protein is the right dose for one sitting." **Move:** Pair the macro math with the muscle-protein-synthesis story. *Creative: "32g per meal. Whey for the kick. Casein for the satiety. The same milk-protein blend cottage cheese gives you — drinkable."*

Belief 7: "Aluminum can vs. plastic bottle matters." **Move:** Consumer Reports phthalate story (without naming Fairlife as enemy). *Creative: "Why an aluminum can? Because plastic bottles aren't just plastic anymore — and we'd rather chill the protein, not the chemistry."*

Belief 8: "This isn't just another influencer brand." **Move:** Lead with Dr. Mitchell + Dr. Li + Dr. Jan credentials and the Senada MBA / WeRise / Aonic Complete trajectory. *Creative: "Senada Greca, MBA. Dr. Jason Mitchell, N.D. Dr. William Li, M.D. The advisory bench AG1 wishes it had."*

Belief 9: "\$3.37/can is worth it because the alternative costs me more than \$2.30." **Move:** Reframe the price as net-of-bloating, net-of-aftertaste. *Creative: "Premier is \$2.30 + 2 hours of bloat + the sucralose aftertaste. Aonic Fuel is \$3.37 + the next can."*

Belief 10 — Converted: "I drink this every morning. I keep one in the car. I told my friends about it." **Move:** The Slate-template loyalist quote, repurposed for Aonic Fuel. *Creative (UGC / testimonial layer): "My whole family drinks this now. It's clean, it's refreshing, and I love it."*

Funnel Architecture

Top of funnel — paid cold traffic

Channels: Meta (Facebook + Instagram), TikTok, YouTube Shorts/in-stream, podcast pre-rolls (Mary Claire Haver / Stacy Sims / Mike Israetel / Casey Means / Andrew Huberman ad inventory).

Creative angles:

- **Hook 1 (sucralose-wedge):** Three-second ingredient-list zoom-in on a competitor can (face blurred), cut to Aonic Fuel can. Caption: "32g of protein. Zero sucralose."
- **Hook 2 (math-wedge):** Static cal-per-gram comparison table. Headline: "The cleanest 32g of protein you can drink."
- **Hook 3 (Senada-frame):** Senada Greca in studio, holding a can: "This is what I drink after a workout. Real cocoa. 32g protein. Zero artificial sweeteners. Built it because the others lied."
- **Hook 4 (Dr. Mitchell-frame):** Dr. Mitchell on camera, lab-coat optional: "The most widespread and underestimated issue in modern nutrition is the overuse of artificial sweeteners. I refused to use them in Aonic Fuel."

Cold-traffic landing destination: A short-form advertorial page that opens with the Mike Israetel ranking, introduces the sucralose problem, then routes to the product page. **Not** the product page directly.

Mid-funnel — site visitors who didn't convert + warm retargeting

Channels: Meta retargeting, Google retargeting, email (welcome flow), TikTok retargeting.

Creative angles:

- **Ingredient comparison page** — side-by-side label of Aonic Fuel vs. Premier vs. Fairlife (without naming Premier / Fairlife — use generic "Brand A," "Brand B" iconography, but the inference is clear). Ingredient counts highlighted.
- **Senada Greca origin story video** — 60-second behind-the-can story tying End Fake Health → Aonic Complete → Aonic Fuel.
- **Dr. Mitchell expert testimony** — long-form (90–120s) doctor-credibility video for Avatar 3 / GLP-1 retargeting.
- **First-can challenge** — *"Try one can. If you keep your case in the fridge for two weeks, you'll know."*

Bottom of funnel — high-intent / shopping-cart abandoners / subscription drop-offs

Creative angles:

- **Subscription incentive** — first-month subscription discount + locked price for 12 months ("subscribe before X to lock in launch pricing").
- **Bundle with Aonic Complete** — cross-sell the brand ecosystem. Position as the "Aonic Morning Stack."
- **Testimonial-driven retargeting** — UGC reviews from first 500 buyers; lean into the *"My whole family drinks this"* Slate-template moment.
- **First-can guarantee restated** — *"We-Use-It-Ourselves Guarantee. If we wouldn't drink it, we wouldn't ship it. Try one."*

Email flow (post-purchase)

1. Welcome + first-can ritual (suggested morning routine + commute / pre-gym timing)
2. Day 3: Dr. Mitchell story + ingredient deep-dive
3. Day 7: Senada Greca behind-the-can video
4. Day 14: First-month review request + UGC ask
5. Day 21: Subscription nudge (auto-replenish at original launch pricing)
6. Day 30: Cross-sell Aonic Complete bundle

Potential domains

For ad creative landing pages, advertorial URLs, and partner campaigns. Default site stays aoniclife.com.

1. **aoniclife.com/fuel** (default — already live)
2. **drinkaonicfuel.com** — campaign landing
3. **realcocoaprotein.com** — Senada-frame angle
4. **endfakehealth.com** — Senada mission-anchored landing
5. **nosucraloseprotein.com** — Avatar 1 enemy-frame
6. **32gnoshortcuts.com** — macro + integrity frame

7. **cleanproteinshake.com** — generic clean-frame landing (Avatar 1)

8. **aonicfueltrial.com** — first-can / subscription incentive page

(Verify domain availability before purchase. Default cleanest stays aoniclife.com/fuel.)

Examples / Swipes — real ad creative from the comp set

Real ads observed across the direct competitor set, useful as creative reference points to imitate-or-differentiate.

Sucralose-attack creative pattern (lift from)

- **Slate Milk's "no sucralose, no carrageenan, no lactose, nothing gut-disrupting" landing copy** (slatemilk.com). The single cleanest "what we DON'T put in" frame in the category. Aonic Fuel can lift the structure without the carrageenan claim.
- **Orgain "20g Clean Protein Shake — no sucralose, no carrageenan" (orgain.com)**. The "Clean Whey" line is the explicit lift target.
- **Naked Whey's "only 3 ingredients" front-of-pack** — extreme version of the clean-label frame. Aonic Fuel's version is "real cocoa, real vanilla, lactose-free MPI" — less extreme, more deliverable as RTD.

Doctor-credibility creative pattern (lift from)

- **AG1's Bryan Johnson backlash → AG1 doctor-advisory recovery campaign**. The competitive lesson: when a celebrity-led brand catches credibility flak, lean into the medical advisory bench HARD. Aonic Fuel starts on the right foot here — lead with Dr. Mitchell from launch, don't wait for the backlash.
- **Slate's "Manny + Josh + Shark Tank" founder story** — works for Slate because the underdog narrative is honest. Aonic Fuel's version is "Senada + Max + Dr. Mitchell + the End Fake Health mission."

Mike Israetel framework creative (use the framework)

- **Mike Israetel's RTD ranking video on Renaissance Periodization YouTube + Men's Fitness coverage** — the framework that ranked Fairlife #1, Owyn #2, Premier #8. Aonic Fuel's creative can use his framework verbatim: "high protein, low fat, clean ingredients, good taste." Aonic Fuel hits the top of his framework even better than Fairlife on the calorie efficiency + clean-label axes.

Visual / design pattern (differentiate from)

- **Premier's Costco-pallet bulk-energy aesthetic** — bright color blocking, oversized claims, value framing. Aonic Fuel must look NOTHING like this — premium clean-fuel cue, more like Slate or Aonic Complete's existing identity than Premier.
- **Owyn's pastel plant-based aesthetic** — Aonic Fuel is dairy-based and shouldn't look plant-y.
- **Fairlife's milk-carton heritage aesthetic** — Aonic Fuel is in a can, not a Fairlife-style bottle; the visual

language should look more like a premium cold brew than a milk product.

Ad-copy swipes to test (verbatim VOC sentences as headlines)

- *"Trust the Ingredient List, Not the Health Claim."* — Annals of Family Medicine paper title; test as headline.
 - *"By the end of the bottle, the sucralose builds up."* — Thirsty Bear Premier reviewer; test as identification headline.
 - *"You can legitimately give this to children and they'll think it's a vanilla milkshake."* — Mike Israel on Fairlife; test as taste-bar-anchor for Aonic Fuel testimonial.
 - *"Did it cure my [symptom]? No. Did it make me feel more equipped to handle [breakfast]? Absolutely."* — Fab Fit Mommy compliance-safe template; test for Avatar 3 / GLP-1 ad copy.
-

Other notes

Creative golden rules

- **Carrageenan is OFF-LIMITS as an attack angle.** Aonic Fuel contains it. Any "no carrageenan" claim is a self-own. (See `Aonic_Fuel_VOC_Dossier.md` §0.5.)
- **Sucralose is THE attack angle.** Aonic Fuel does NOT contain it. The entire VOC corpus rewards anti-sucralose framing. Lead with it.
- **Lactose-free is ticket-to-play, not a wedge.** Fairlife, Iconic, Owyn, Muscle Milk Pro all market lactose-free. Pair it with the no-sucralose wedge; don't lead with it standalone.
- **Never name a GLP-1 by brand in copy** (Wegovy / Ozempic / Mounjaro / Zepbound). Use *"for people changing how they eat"* — let Marcus self-identify.
- **Compliance-safe outcome verbs only:** *supports, helps, fuels, covers, fits, makes me feel more equipped.* NEVER *cures / treats / prevents / balances hormones / boosts immunity / clinically effective.* (See `Aonic_Fuel_VOC_Dossier.md` §7.)
- **The Fab Fit Mommy compliance MVP:** *"Did it cure my [X]? No. Did it make me feel more equipped to handle [Y]? Absolutely."* Mirror this construction whenever a benefit edges close to a disease claim.

Pricing-strategy notes

- \$3.37/can on subscription is the *price-to-feel-cleaner* anchor, not a price-to-undercut anchor.
- The subscription discount is the path to LTV. First-can buyers will be skeptical; subscribers are the loyalists.
- Bundle with Aonic Complete to build the "Aonic Morning" stack — average order value lift, brand-ecosystem stickiness.

Brand-ecosystem notes

- Aonic Fuel is the second SKU in the line (Complete launched November 2025; Fuel launched April 30,

2026; Race / Build / Flow are roadmap).

- The Aonic Complete buyer is the most likely Aonic Fuel buyer. The brand should run a cross-sell sequence as soon as Complete subscriber base hits scale.
- WeRise (Senada's fitness app) is the natural audience cross-sell — 7M Instagram followers, app users who already train daily. Coordinate with the WeRise side for organic / influencer promotion.

Compliance + brand-voice red lines (one-screen reference)

Tempting	Replace with
"Cures lactose intolerance"	"Lactose-free milk protein isolate — gentle on the stomach"
"Big Pharma protein"	"Real ingredients, scientifically studied dosages — and a label that fits in one breath"
"Eliminates GLP-1 muscle loss"	"Built for people changing how they eat. 32g of complete protein, gentle on the stomach"
"Money-back guarantee"	"We-Use-It-Ourselves Guarantee"
"Clinically effective"	"Scientifically studied dosages"
"Tastes like a milkshake"	"Tastes like real cocoa, because it is"
"No fillers"	"No artificial sweeteners. Stabilizers at scientifically studied dosages."

Things to verify with the brand before final ad copy

1. **Discovery Story specifics** — the brand may have a more specific origin story (a tasting session, a Senada moment, a Dr. Mitchell decision) that should replace the generic frame I scaffolded.
2. **Subscription pricing locked at launch** — confirm \$40.49 launch price is the long-term floor or if it's promotional.
3. **Costco / retail roadmap** — confirm timing so the "Why isn't this at Costco?" objection answer doesn't surprise the brand.
4. **WeRise cross-promo permission** — confirm Senada is comfortable using WeRise audience for Fuel cross-promo.
5. **Senada / Dr. Mitchell on-camera availability** — the doctor + founder video assets are critical to Avatar 3 + Avatar 1 creative; confirm they'll shoot.
6. **HERS / HIS funnel for Fuel?** Aonic Complete uses HIS/HERS gendered funnels. Confirm whether Fuel will follow this segmentation or run a single unified funnel.

End of Offer Brief. All sections complete. Pulls verbatim from `Aonic_Fuel_VOC_Dossier.md` §§ 0, 1, 2, 3A–3K, 4, 5, 7 and `Aonic_Fuel_Avatar_Sheets.md` Avatars 1, 2, 3.
