

Aonic Fuel — The 6 Beliefs the Prospect Must Hold to Buy

Source materials: Aonic_Fuel_VOC_Dossier.md (172 numbered verbatim quotes + 30+ contextual), Aonic_Fuel_Avatar_Sheets.md (Avatars 1, 2, 3), Aonic_Fuel_Offer_Brief.md (10-step granular belief chain, compressed below into 6 meta-beliefs).

Brand-approved language anchors used throughout (preserve verbatim in any installation copy):

- *Scientifically studied dosages* — NEVER "clinically effective"
- *No pixie-dusting*
- *We-Use-It-Ourselves Guarantee* — brand does NOT offer refunds
- *Zero artificial sweeteners* — the cornerstone
- *Real cocoa / real vanilla* — NEVER "natural flavor"
- *Complete protein / complete amino acid profile*
- *Made in USA with globally sourced ingredients*
- *End Fake Health* — Senada Greca's mission framing
- *From our small space in San Francisco, we're redefining the health and wellness space...*
- *The 5 Aonic Principles: Built with Intent & Impact / Scientifically Studied Dosages / Premium Ingredients / Delicious Taste, Low in Calories / We-Use-It-Ourselves Guarantee*

The six beliefs below are the prospect's belief architecture for Aonic Fuel specifically. Each independently necessary, in logical-dependency order. If any one collapses, the purchase doesn't happen. The beliefs are universal across the three Fuel avatars (Premier-Protein Refugee / Macro-Tracking Athlete / GLP-1 Muscle-Protector); only the proof points and entry-point belief differ per avatar.

The belief chain reconciles with the Offer Brief's 10-step granular chain — the 6 below are the **meta-architecture**, the Offer Brief's 10 are the **granular installation steps**. See §Reconciliation table at the end.

Belief 1 — Category necessity

"I believe that hitting my daily protein target without a chemistry-set ingredient list is non-negotiable for the life I'm trying to build."

Without this, nothing else matters. The "I'll just eat more chicken" skeptic is the prospect who hasn't accepted this belief yet — but they're rare in 2026. The protein-shake category buyer arrives with this belief already mostly installed; the question is which *version* of the belief they hold and how easily it can be upgraded into a clean-shake preference.

The three avatars differ on *why* convenient protein matters to them:

- **Premier-Protein Refugee (primary):** Already drinks 1–2 shakes/day, has accepted convenient protein as part of the morning. The belief upgrade is from *"convenient protein is fine"* to *"convenient protein has to be*

CLEAN, or the shortcut isn't a shortcut anymore." Quote installing the upgrade: *"I'm trying to cut out artificial sweeteners... I'll finish up the case but will try a healthier one next time."* ([Green Matters](#))

- **Macro-Tracking Athlete:** Belief is FULLY installed — they're already at 1g/lb lean mass and counting macros. The version they hold is *"the most efficient grams-per-calorie wins my dollar."* Quote: *"Most efficient way for me to cover my nutritional bases."* (AG1 verified reviewer, cross-applicable.) The job is to upgrade *efficient* to *efficient AND clean*.
- **GLP-1 Muscle-Protector:** Belief is installed via doctor warning — the most emotionally charged version of all three. Quote: *"GLP-1s can accelerate muscle loss. The medication doesn't attack muscle directly. Instead, it suppresses appetite so effectively that patients often enter a severe calorie and protein deficit."* ([US News](#)) The version they hold is *"liquid protein is the answer because I can't eat solid food right now."*

Brand-approved installation language:

"Aonic Fuel — Clean Complete 32g Protein Shake. 5g fiber to support satiety & digestive wellness. 5 calories per gram of protein. Made with real cocoa or vanilla. Zero artificial sweeteners. 0g added sugar."

Avoid: *"boost," "unlock," "optimize," "boost immunity," "cleanse," "detox."*

Why this belief is comparatively easy for Fuel: Aonic Complete's Belief 1 ("I need foundational nutritional coverage beyond what my diet alone gives me") is harder because the customer doesn't *feel* a vitamin deficiency the way they feel a protein gap. The protein-shake market has been actively educating itself on protein dosing for a decade — Mary Claire Haver, Stacy Sims, Peter Attia, Mike Israetel, Casey Means. The TikTok "high protein" trend alone delivers 3× engagement on every Awada-style recipe post ([Bustle](#)). Fuel inherits all that education for free.

Belief 2 — Current-solution inadequacy

"I believe that the protein shake currently in my fridge — and the ones I've cycled through trying to replace it — aren't actually clean, and the bloat / aftertaste / chalkiness isn't going to fix itself."

This is the *quit-trigger* belief. The Premier-Protein Refugee has lived it; the Macro-Tracking Athlete is half-aware of it; the GLP-1 Muscle-Protector is most exposed to it because of nausea-amplified sensitivity to any artificial ingredient.

The current "solution" differs by avatar, but the inadequacy belief is the same:

- **Premier-Protein Refugee (primary):** Quitting Premier or Fairlife mid-case. The verbatim quit-trigger arc from the VOC dossier §3A:

"Wish I had read this before buying a case of Premier Protein Lemon Bar (very tasty). I'm trying to cut out artificial sweeteners... I'll finish up the case but will try a healthier one next time." ([Green Matters](#))

Plus the gut-distress trigger:

"I drank Premier Protein and Fairlife for a while... They just twisted my guts in knots." ([Intermountain Center for Wellbeing](#))

Plus the failed-clean-alternative cycle:

"The shakes taste awful—bitter, chalky, with a strong, weird aftertaste—glad I only bought one pack and will have to choke them down like medicine." ([Owyn 1-star Amazon review](#))

"I have a hard time with the strange sugar taste and almost prefer no sugar at all rather than that weird stevia taste." ([Orgain ConsumerAffairs](#))

- **Macro-Tracking Athlete:** Knows the label problem academically but hasn't quit yet — buys Premier at Costco for the math. The unlock quote:

"Tastes fine but has a LOT of unneeded junk in it." (r/Costco on Kirkland Whey via [Daily Meal](#))

And the math wake-up: Mike Israetel ranked Premier #8 of 11 ([Men's Fitness](#)). The Macro-Tracking Athlete reads that, looks at his rotation, and realizes he's drinking *rank eight*.

- **GLP-1 Muscle-Protector:** Quit Premier for nausea, quit Fairlife for bloat, quit Owyn for thickness. The quote:

"Bloating, gas, or stomach discomfort after drinking Premier Protein shakes." ([Daily Dot](#))

And the format failure:

"It basically tastes like canned milk and has a strange chalkiness that I can't get out of my mouth after drinking it." ([Slate Walmart 1-star](#))

The industry has now named this pain — it's the "category fatigue" of cycling through shakes looking for one that doesn't have sucralose, carrageenan, or stevia-aftertaste. The belief is more available in 2026 than it was in 2022 because creators like Mike Israetel and dietitian-aggregators have made the ingredient-list-reading habit mainstream.

Brand-approved installation language:

"You quit Premier. You tried Owyn. You tried Aloha. You drank cottage cheese with hot sauce. You're here for a reason."

Plus the Dr. Jason Mitchell, N.D., Chief Medical Advisor quote (the verbatim installation tool):

"The most widespread and underestimated issue in modern nutrition is the overuse of artificial sweeteners. They are often used as a shortcut to make products appear healthier than they are." ([Yahoo Finance launch announcement](#))

Avoid: any direct attack on a competitor *brand* by name in Meta ad copy (use generic "Brand A / Brand B" iconography). Attack the *ingredient choice* the whole category leans on, not the brands themselves.

Belief 3 — A real alternative is structurally possible

"I believe that a complete-protein shake with 32g of protein, real cocoa, and zero artificial sweeteners CAN exist — and I can drink it every day without my stomach (or my macros, or my standards) paying the price."

This is the *category-creating* belief. Without it, the prospect either keeps cycling through "clean" shakes that fail (Owyn, Aloha, Orgain) or gives up and goes back to Premier with resignation.

The argument the prospect has to accept is mechanistic, not aspirational:

1. **The protein source itself can be structurally different.** Milk protein isolate (MPI) ultrafilters lactose and most fat out of whole milk while preserving the native 20% whey + 80% casein ratio. That's why Slate and Iconic (both MPI-based) draw the only "no-chalkiness" reviews in the category:

"First off, the taste is incredible. It actually tastes like a delicious, creamy milk shake, not your typical chalky protein drink." ([Slate Walmart 5-star](#)) "Unlike many protein shakes that taste like chalk, Core Power is creamy and delicious." ([Tumlove on Fairlife](#))

The mechanism this belief installs: *casein-driven satiety + whey-driven muscle-protein-synthesis kick + ultrafiltration = the shake your body interprets as "complete protein from real milk."*

2. **The sweetener system can be plant-derived.** Stevia Reb A/D/M (the cleanest stevia fractions, which avoid the bitter aftertaste of whole-leaf stevia or Reb C/E) + monk fruit + real cocoa lets a brand hit "0g added sugar / 32g protein" without sucralose. Most brands don't bother because real-cocoa formulation costs more.

"Garden of Life Protein uses stevia as a natural sweetener, derived from stevia plant leaves, which is a plus for those cautious about artificial sweeteners." ([Robor Fitness](#))

3. **The math can work without artificial-sweetener loopholes.** 5.0 calories per gram of protein is achievable when you start with MPI and don't pile filler on top. Aonic Fuel proves it: 32g / 160cal = 5.0 cal/g — the cleanest macro density in the mainstream RTD category (beats Premier at 5.33, Fairlife 26g at 6.54, Owyn Pro Elite at 9.0). The chart from Offer Brief §UMS:

Brand	Protein (g)	Calories	cal/g protein
Aonic Fuel	32	160	5.0 (best in class)
Premier Protein	30	160	5.33
Quest Milkshake	30	170	5.67
Fairlife Core Power 26g	26	170	6.54
Muscle Milk Pro 32g	32	210	6.56
Owyn Pro Elite	32	290	9.06

The avatars accept this belief at different angles:

- **Premier-Protein Refugee** accepts it via taste and the ingredient list — *"if Slate can taste like a milkshake without sucralose, someone can do this at 32g."*
- **Macro-Tracking Athlete** accepts it via the math — *5.0 cal/g is mathematically possible, I just hadn't seen*

a brand commit to it.

- **GLP-1 Muscle-Protector** accepts it via the medical credibility — if a Chief Medical Advisor put his name on it, the structural argument is real.

Brand-approved installation language:

*"Real cocoa. Real vanilla. Lactose-free milk protein isolate. Stevia Reb A/D/M + monk fruit — the cleanest plant-derived fractions available. Scientifically studied dosages. No pixie-dusting. **The protein shake category was hijacked by sucralose. We refuse to use it.**"*

Important guardrail: the alternative claim Aonic Fuel CAN make is "no artificial sweeteners." The alternative claim Aonic Fuel CANNOT make is "no carrageenan" — Fuel's stabilizer blend contains food-grade carrageenan at scientifically studied dosages (per `Aonic_Fuel_VOC_Dossier.md` §0.5). Any copy that attacks competitors on carrageenan would be a self-own. The "real alternative" Aonic Fuel offers is *clean ingredient list at the sweetener layer and the flavor layer*, not zero stabilizers.

Belief 4 — Aonic Fuel IS that alternative

"I believe that Aonic Fuel delivers what a clean complete protein shake should — 32g of complete protein from lactose-free milk protein isolate, real cocoa or real vanilla, zero artificial sweeteners, 5g fiber, 160 calories, in an 11 fl oz aluminum can. Scientifically studied dosages. No pixie-dusting. We-Use-It-Ourselves Guarantee."

This is the **destination belief** — the one the previous three lead to. Every piece of proof in the campaign exists to install this belief. If beliefs 1–3 are in place and the prospect doesn't reach belief 4, the funnel is leaking on **proof, format, or trust**, not on category logic.

The Aonic Fuel-specific proof stack:

- **Senada Greca, MBA** (Co-Founder & Scientific Advisor) — story, daily-life proof, ritual. 7M+ Instagram followers; Kim Kardashian's personal trainer; founder of WeRise; her "End Fake Health" mission framing carries the brand voice. Public quote: "Caring for ourselves, body and mind, starts from the inside out with quality food and supplements that have high-quality ingredients, and that's what Aonic represents." ([WWD](#))
- **Dr. Jason Mitchell, N.D.** (Chief Medical Advisor — Fuel-specific) — appointed at the April 30, 2026 launch to lead "scientific and formulation strategy" and the "push to eliminate artificial sweeteners." His on-camera quote is the verbatim installation tool for this belief.
- **Dr. William Li, M.D.** (Medical Advisor) — NYT bestseller, *Eat to Beat Disease*. Brand-wide credibility.
- **Dr. David Jan, Ph.D.** (Scientific Advisor) — Harvard-trained. Brand-wide mechanism authority.
- **Press credibility:** Forbes · People Magazine · Yahoo Life · AthleTech News · WWD · TrendHunter.
- **Format proof:** 11 fl oz aluminum can. Not Tetra Pak. Not plastic bottle. No phthalate exposure (the Consumer Reports Fairlife story is the implicit anti-proof; Aonic Fuel's format choice is the explicit answer).
- **Macro proof:** 32g / 160cal / 5g fiber / 5.0 cal per gram of protein.
- **Ingredient proof:** Public ingredient list on [aoniclife.com](#) and [OpenFoodFacts](#) — verifiable.
- **Brand-ecosystem proof:** Aonic Complete launched November 2025, generated press at Forbes / People / Yahoo Life. Fuel is the second SKU in a credible brand line, not a one-product cash-grab.

Brand-approved installation language (the belief-4 H1 candidate):

"From our small space in San Francisco, we're redefining the health and wellness space — starting with the shake in your fridge. Aonic Fuel. 32g complete protein. Real cocoa. Zero artificial sweeteners. Scientifically studied dosages. No pixie-dusting."

Or the more compressed test-version:

"Built by a doctor who refused to use artificial sweeteners. Co-founded by Senada Greca. 32g protein, real cocoa, zero shortcuts."

Per-avatar proof emphasis:

- **Premier-Protein Refugee:** lead with the Senada origin story + the ingredient list ("real cocoa, lactose-free MPI, stevia Reb A/D/M + monk fruit"). The label IS the proof for this buyer.
- **Macro-Tracking Athlete:** lead with the macro chart + the MPI mechanism explainer. Math IS the proof.
- **GLP-1 Muscle-Protector:** lead with Dr. Mitchell + the doctor-credibility wrapper + the format (sippable, 11 fl oz, no plastic). Medical reassurance IS the proof.

Belief 5 — The price / format / no-refunds policy is worth it

"I believe that \$3.37/can (on sale, \$4.50 full) for an 11 fl oz can of Aonic Fuel, with no refund policy, is the right price — because what I've been paying for so far has cost me more in bloat, aftertaste, second-guessing, and brand-switching than the price gap."

This is the *value-reframe* belief — the one that converts "this is more expensive than Premier" into "this is the price of finally being done shopping for a protein shake."

The challenge: Aonic Fuel at **\$3.37/can on sale / \$4.50 full** is materially more than Premier Protein at \$2.30/can at Costco. The brand-approved counter is **net-of-failure economics**, not undercutting:

- **Premier costs \$2.30 + 2 hours of bloat + the sucralose aftertaste lingering.** The full cost of a Premier morning is the can plus the hour-of-regret.
- **Aonic Fuel costs \$3.37 + the next can.** No lingering aftertaste. No bloat tax.
- **The math closes for the buyer who has already quit Premier or Fairlife once.** For the Costco-volume loyalist who's still happy with Premier, the math doesn't close — and that's fine, that's not Aonic Fuel's target.

Compared to direct-equivalent clean shakes:

Brand	Price/can	Aonic Fuel value frame
Premier Protein	\$2.30 (Costco)	"\$1.07 more buys you no sucralose, real cocoa, and 32g instead of 30g."
Fairlife Core Power 26g	\$2.50–\$3.00	"Same price ballpark. 32g instead of 26g. Aluminum can instead of phthalate-flagged plastic."

Iconic	\$3.79	"\$0.42 LESS than Iconic, with 12g more protein (32g vs 20g)."
Slate	\$2.50–\$3.50	"Comparable price. 12g more protein (32g vs 20g) at the same MPI texture quality."
Quest Milkshake	\$3.50–\$4.50	"\$0.13–\$1.13 less than Quest. Quest still uses sucralose. We don't."

The "no refunds" policy is the hard part of this belief. The brand-approved framing repurposes the no-refund constraint into a conviction signal — the *"We-Use-It-Ourselves Guarantee"* (verbatim brand language). The argument:

"Aonic uses a We-Use-It-Ourselves Guarantee — we put our names on the can and we drink it every day. If something is wrong with your case (damaged, leaking, expired), reach out at hello@aoniclife.com and we'll make it right. We don't process taste-based refunds — the same way Costco doesn't refund the case of seltzer you decided you didn't like. We hold ourselves to the bar of consistency we'd hold our own household to." (from Aonic_Fuel_Offer_Brief.md Objection O13)

Risk-reversal substitutes for the no-refund policy (these have to do the work refunds usually do):

- **The Mike Israetel ranking framework** — Aonic Fuel hits the same "high protein, low fat, clean ingredients, good taste" criteria that put Fairlife at #1.
- **Senada's public visibility** — 7M Instagram followers, MBA-credentialed, Kim Kardashian-adjacent. Public-figure accountability is the soft floor.
- **Dr. Mitchell's medical authority** — the doctor's name on the formulation is the soft floor for the GLP-1 Marcus.
- **Aonic Complete's existing 4.65 / 156-review track record** — brand-ecosystem proof.
- **First-can framing** — *"Try one. You'll know in the first sip."* The first-can experience is the practical refund substitute.

Per-avatar value-frame emphasis:

- **Premier-Protein Refugee:** "\$1.07 more buys you no bloat." Anchor on net-of-failure economics.
- **Macro-Tracking Athlete:** "32g/160cal at \$3.37/can = \$0.105 per gram of protein. Premier is \$0.077/g (cheaper) but Aonic Fuel beats Premier on cal-per-gram efficiency, ingredient list, and Mike Israetel rank-order." The Macro-Tracking Athlete is willing to pay 35% more for the cleaner math.
- **GLP-1 Muscle-Protector:** "\$3.37/can vs. \$1,000+/month for the GLP-1 itself = the protein shake is the most affordable line item in your monthly health-spend." Least price-sensitive of the three avatars.

Belief 6 — Now is the right time to switch / start

"I believe that the cost of continuing to drink what I already know I don't trust is greater than the cost of trying Aonic Fuel today."

This is the *activation belief* — the one that converts *"I'll think about it"* into a checkout button.

The trigger argument differs by avatar but the structure is the same: *every additional week of drinking sucralose, paying for bloat, or skipping protein because the available options aren't trustworthy is a week your*

goals stall.

- **Premier-Protein Refugee:** The case of Premier in the fridge is the daily reminder of the unresolved decision. The next case is the deadline.
- **Macro-Tracking Athlete:** Already drinking 1–2 shakes a day. 365 days × 1.5 shakes × 90 seconds-of-aftertaste-each = ~13 hours/year of *"this tastes like sucralose"*. He'll pay \$400+ to get those 13 hours back.
- **GLP-1 Muscle-Protector:** Every week of insufficient protein on the GLP-1 is a measurable risk of lean-mass loss the doctor explicitly warned about. The clock is on the medication, not on the marketing.

Brand-approved installation language:

"Try one can. If it earns its place in your routine after the first sip, the rest follows. The 12-pack is on the page. The We-Use-It-Ourselves Guarantee is what we ship with every order — because if we wouldn't drink it, we wouldn't ship it."

Plus the **first-can ritual nudge** (compliance-safe activation):

"Drink it cold. Drink it shaken. Drink it sipped over 30 minutes if you're easing into liquid protein. Most people know by the first can."

The Fab Fit Mommy compliance-MVP template (cross-referenced from Complete corpus, mirrors the Aonic-approved structure verbatim — use whenever a benefit edges close to a disease claim):

"Did it cure my [perimenopause / nausea / commute-skipping breakfast]? No. Did it make me feel more equipped to handle [the day / the gym / the school run]? Absolutely."

Per-avatar activation triggers:

- **Premier-Protein Refugee:** *"You already finished the half-case of Premier you said would be the last one. Today's the day."*
- **Macro-Tracking Athlete:** *"Stop drinking rank-eight. The Mike Israetel framework that ranked Fairlife #1 and Premier #8 is the same framework that scores Aonic Fuel at the top: high protein, low fat, clean ingredients, good taste."*
- **GLP-1 Muscle-Protector:** *"Your doctor told you to hit 25–30g of protein every 3–4 hours. Aonic Fuel hits 32g per can. Built by Dr. Jason Mitchell, N.D., for people changing how they eat."*

Reconciliation table — these 6 vs. the Offer Brief's 10

The granular 10-step belief chain in `Aonic_Fuel_Offer_Brief.md` is the *installation sequence*; the 6 above are the *meta-architecture*.

Offer Brief's granular belief	Meta-belief
1. Protein shakes are basically the same — pick the cheapest one that doesn't taste terrible	Belief 1 (category necessity — upgrade from "any protein shake" to "clean protein shake")
2. Some shakes are better than others — but it's mostly about taste	Belief 1 (continued) → Belief 2 (current solution inadequacy — the ingredient layer matters)

3. Sucralose is FDA approved, isn't it fine?	Belief 2 (current solution inadequacy — Dr. Mitchell installs the doubt)
4. Every "clean" alternative tastes like punishment	Belief 3 (a real alternative is structurally possible — must overcome the Owyn/Orgain/Aloha disappointment)
5. Real cocoa instead of natural flavor would actually be different — but the math has to work	Belief 3 (continued — math + mechanism)
6. 32g of protein is the right dose for one sitting	Belief 3 (continued — dosing)
7. Aluminum can vs. plastic bottle matters	Belief 4 (Aonic Fuel IS that alternative — format proof)
8. This isn't just another influencer brand	Belief 4 (continued — credibility stack proof)
9. \$3.37/can is worth it because the alternative costs me more than \$2.30	Belief 5 (price/format/no-refunds is worth it)
10. I drink this every morning. I keep one in the car. I told my friends about it.	Belief 6 (now is the right time — and the loyalist arc that follows)

Copy flow by avatar — where to start the belief chain

The beliefs are installed in different orders depending on what the prospect already believes when they arrive. Three recommended copy flows below.

Avatar 1 — Premier-Protein Refugee (PRIMARY)

Beliefs 1 and 2 are mostly installed when this avatar shows up — they already quit Premier or Fairlife and are mid-search for a replacement. They've also tried Owyn, Orgain, or Aloha and been burned. The work is concentrated on **Beliefs 3, 4, and 6**.

Copy order:

1. **Open at Belief 2** — validate the quit. *"You quit Premier for a reason. The sucralose. The bloat. The lingering aftertaste. You weren't crazy."* (Dr. Mitchell quote here.)
2. **Bridge to Belief 3** — make the structural argument. *"A real alternative is possible: lactose-free milk protein isolate, real cocoa, stevia Reb A/D/M + monk fruit, 32g of complete protein."*
3. **Install Belief 4** — Aonic Fuel IS that alternative. Senada origin story. Ingredient list. *"From our small space in San Francisco..."* and the *"End Fake Health"* mission.
4. **Address Belief 5** — net-of-failure economics. *"\$1.07 more than Premier buys you no bloat."*
5. **Close on Belief 6** — first-can framing. *"Try one. The first sip is the test."*

Strongest single belief for this avatar: Belief 3. They need to believe the *category alternative* is real before they'll trust Aonic Fuel specifically.

Avatar 2 — Macro-Tracking Athlete

Belief 1 is fully installed. Belief 2 is partially installed (he knows about sucralose but still uses Premier for convenience). Belief 3 is the unlock. Beliefs 4–6 are math-driven from there.

Copy order:

1. **Open at Belief 3** — math and mechanism. *"The cleanest 32g of protein you can drink. 5.0 cal per gram of protein. Beats Premier (5.33), Fairlife (6.54), and Muscle Milk Pro (6.56)."*
2. **Install Belief 4** — the MPI mechanism explainer + Dr. Mitchell credential. *"Lactose-free milk protein isolate — the same whey + casein blend cottage cheese gives you. Real cocoa. Zero artificial sweeteners. Built by Dr. Jason Mitchell, N.D."*
3. **Address Belief 2 implicitly** — reference Mike Israetel's ranking. *"Premier scored #8 of 11 in Mike Israetel's RTD breakdown. Aonic Fuel was built to score at the top of his framework."*
4. **Address Belief 5** — the per-gram math + the *"this is the bar in your gym bag, not the tub on your counter"* positioning.
5. **Close on Belief 6** — *"You drink 365 of these a year. Pick the one with the cleanest math."*

Strongest single belief for this avatar: Belief 3 (math) and Belief 4 (mechanism). He converts on numbers.

Avatar 3 — GLP-1 Muscle-Protector

Belief 1 is fully installed (the doctor / U.S. News article installed it). Belief 2 is installed via failed Premier / Fairlife / Owyn attempts. Belief 3 is partially installed — he knows a clean shake should exist but hasn't trusted any of the ones he's tried. Belief 4 is the gatekeeper — he needs medical reassurance before he commits.

Copy order:

1. **Open at Belief 4 — but lead with Dr. Mitchell.** *"Built by a doctor who refused to use artificial sweeteners."* Dr. Mitchell on camera. Compliance-safe framing — never name Wegovy / Ozempic / Mounjaro / Zepbound; use *"for people changing how they eat."*
2. **Anchor Belief 2 via doctor language.** *"Your doctor told you about muscle loss. Your doctor also told you about ultra-processed food. Most protein shakes are both."*
3. **Install Belief 3** via the structural argument — MPI, sippable format, 11 fl oz aluminum can, real cocoa.
4. **Address Belief 5** by reframing the price as *"the most affordable line item in your monthly health-spend."*
5. **Close on Belief 6** with the Compass Nutrition / Bolt Pharmacy dosing framework — *"Aim for 25–30g of protein every 3–4 hours. Aonic Fuel hits 32g per can."*

Strongest single belief for this avatar: Belief 4. Medical reassurance is the conversion gate.

What a single piece of copy needs to do

A single piece of copy doesn't need to install all 6 beliefs. Most short-form ads do one. A full long-form sales page or VSL does all six in sequence.

Belief 4 is the North Star. Beliefs 1–3 are the dependency tree. Belief 5 is the trade-off resolution. Belief 6 is the trigger. Every sentence in any piece of Aonic Fuel copy should be testable against *"which of these 6 beliefs am I installing right now?"* If a sentence doesn't move the reader toward one of these 6, it's decoration — and decoration is the "magnificent words" trap the brand explicitly wants to avoid.

The order each avatar enters the chain at is the single most important creative-routing decision the brand will make:

- **Premier-Protein Refugee** enters at Belief 2 (validate the quit) — and 60%+ of paid creative budget should serve this avatar at this entry point.
- **Macro-Tracking Athlete** enters at Belief 3 (math) — and gets a different headline rotation entirely.
- **GLP-1 Muscle-Protector** enters at Belief 4 (Dr. Mitchell credibility) — and his creative is doctor-led, not lifestyle-led.

Mixing these creative routes (e.g., showing the Macro-Tracking Athlete an "End Fake Health" Senada lifestyle ad, or showing the Premier-Protein Refugee a 5.0-cal-per-gram math chart cold) wastes impressions. Sub-creative segmentation matters.

A note on the brand-required language anchors

These are non-negotiable. Every belief-installation copy unit **MUST** preserve these verbatim:

- *Scientifically studied dosages* (NEVER "clinically effective")
- *No pixie-dusting* (transparency anchor)
- *We-Use-It-Ourselves Guarantee* (risk-reversal — brand does NOT offer refunds)
- *Zero artificial sweeteners* (the cornerstone competitive claim)
- *Real cocoa / real vanilla* (NEVER "natural flavor")
- *Complete protein / complete amino acid profile*
- *Made in USA with globally sourced ingredients*
- *From our small space in San Francisco, we're redefining the health and wellness space...*
- *End Fake Health* (Senada Greca's mission framing — the single most copy-actionable Aonic Fuel positioning phrase)
- *5 Aonic Principles: Built with Intent & Impact / Scientifically Studied Dosages / Premium Ingredients / Delicious Taste, Low in Calories / We-Use-It-Ourselves Guarantee*

And these are red lines — copy that violates them is non-shippable:

- Never name Wegovy / Ozempic / Mounjaro / Zepbound in any creative
 - Never claim "no carrageenan" (Aonic Fuel contains food-grade carrageenan per §0.5 of the VOC dossier)
 - Never use *cures / treats / prevents / balances hormones / boosts immunity*
 - Never echo *"twisted my guts in knots" / "ulcerative colitis from carrageenan"* — those quotes live in the dossier as customer voice, NOT as creative ammunition
 - Never frame "money-back guarantee" — Aonic uses *We-Use-It-Ourselves Guarantee*
-

— End of beliefs document —
